

Safety Shutoff Valve MVD Series

DUNGS[®]
Combustion Controls

Normally closed safety shutoff valve with the following approvals.

UL Listed

- UL 429
- File # MH16727

CSA Certified

- ANSI Z21.21 / CSA 6.5
- File # LR 112901
- Marked C/I

FM Approved

- Class 7411
- File # J.I.0V9A8.AF

US and Canadian Models

- 1/2" - 3" NPT

Codes and Standards

This product is intended for installations covered by but not limited to NFPA 86, NFPA 37, CSD-1, ANSI Z21.13, UL 795, CSA B149.1 or CSA B149.3.

**Commonwealth of Massachusetts
Approved Product Approval Code
G1-1107-35**

**DUNGS is an ISO 9001
manufacturing facility.**

Description

The DUNGS MVD series are electrically operated normally closed, automatic safety shutoff valves for gas burners and gas appliances.

- Closing time <1 s
- Max. operating pressure up to 7 PSI (500 mbar) on MVD/6
- Max. close off pressure 15 PSI (1000 mbar) on all models
- MVD/6: fast opening/fast closing
- 120 VAC @ 60 Hz in all models, 24 VAC @ 60 Hz (in some models)
- 1/2" NPT conduit connection
- Optional field installable visual indicator (VI) or CPI 400 with indication lamps and SPDT interlock switch for valve position.
- Reliable, quiet operation; rugged and low maintenance.

Application

The DUNGS MVD series safety shutoff valves are recommended for industrial and commercial heating applications that require one safety shutoff valve or two safety shutoff valves in series. This safety shutoff valve is suitable for use with dry natural gas, propane, butane, air and inert gases.

A "dry" gas has a dew point lower than +15 °F and its relative humidity is less than 60 %.

MV-D Normally closed automatic safety shutoff valve, fast opening, fast closing. Adjustable max. flow.

MV-DLE Normally closed automatic safety shutoff valve, slow opening, fast closing. Adjustable initial lift. Adjustable max. flow.

Specifications

Pipe thread (NPT)	1/2" 3/4" 1" 1 1/4" 1 1/2" 2" 2 1/2" 3"
Max. operating pressure	MVD are 7 PSI (500 mbar) / MVDLE is 3 PSI (200 mbar), see page 3
Max. body pressure	15 PSI (1000 mbar)
Max. close off pressure	15 PSI (1000 mbar)
Electrical ratings (-10 % to +15 %)	120 VAC @ 60 Hz, 24 VAC @ 60 Hz (available in some models), 24 VDC (CSA) see page 3 and 4
Power ratings	Refer to type overview page 4
Enclosure ratings	NEMA 12
Electrical connection	Screw terminals with 1/2" NPT conduit connection
Operating time	100 % duty cycle
Closing time	< 1 s
Opening time (to max. flow)	MVD < 1 s MVDLE Adjustable to approx. 10 to 20 s at 70 °F
Initial lift adjustment	MVDLE only - 0 to 70% of total flow; 0 to 35% of stroke
Max. flow adjustment	Adjustable from <10 to 100 % of total flow; <10 to 100 % of stroke
Materials in contact with gas	Aluminium, steel, brass / Seals: NBR-based rubber
Ambient temperature rating	See also page 3
Installation position	Safety shut off valve from vertically upright to horizontal
Test ports	Two 1/4" NPT upstream and two 1/4" NPT downstream ports
Gas strainer (standard)	Installed in the housing upstream (23 mesh)
Position indication (order separately)	CPI 400 with indication lamps and SPDT interlock switch or Visual indicator (VI)
Valve proving system (requires two safety shutoff valves in system)	Type VDK 200, mounts externally using valve side ports or pipe "T"s.

Approvals	Model	Temperature Rating	MOPD (PSI)**	Max. Close Off (PSI)	Electrical Ratings (Volts / Hz)

(MVDLE shown, see page 4 for all values)

Functional description (Reference page 3)

The DUNGS MVD, and MVDLE series valves are automatic safety shutoff valves. The electromagnetic drive opens against the force of the closing spring 4. For the MVD and MVDLE series, the main

flow through valve can be limited by the maximum flow adjustment 8. On the MVDLE series, the hydraulic brake 10 permits slow opening. Initial lift can be adjusted 9. If power is interrupted (operating voltage), closing spring 4 closes the valve within 1 second. The valve position can be visually moni-

tored by using the field installed visual indicator (VI) 12, or it can be visually and electronically monitored by a field installed CPI 400, which includes valve position indication lamps and one SPDT interlock switch 11 (order separately).

Determining equivalent flow through valves using another gas

$$\dot{V}_{\text{gas used}} = \dot{V}_{\text{Natural gas}} \times f$$

$$f = \sqrt{\frac{\text{Density of Natural gas}}{\text{Density of gas used}}}$$

Type of gas	Density [kg/m ³]	s.g.	f
Natural gas	0.81	0.65	1.00
Butane	2.39	1.95	0.58
Propane	1.86	1.50	0.66
Air	1.24	1.00	0.80
