Fisher™ ED, EAD and EDR

Sliding-Stem Control Valves

General Application

Fisher ED, EAD and EDR single-port control valves shown in Figures 1, 2 and 3 have balanced valve plugs, cage guiding and metal-to-metal seating for all general applications over a wide range of process pressure drops and temperatures. These general purpose, sliding-stem valves are used for either throttling or on-off control of a wide variety of liquids and gases.

The Fisher ED product line is available for a wide range of applications, including sulfide and chloride stress-cracking environments common to the oil and gas production industries. To discuss available constructions, contact your Emerson sales office and include the applicable codes and standards required for these environments.

The easy-e™ Valve Family

ED, EAD and EDR valves are part of the versatile easy-e family of Fisher industrial control valves. Easy-e valves share the following characteristics:

- Multiple trim material choices
- Trim temperature capability with standard metal seats to 427°C / 800°F
 - FGM gaskets
- Interchangeable, restricted-capacity trims and full-size trims match variable process flow demands
- Different cage/plug styles provide particular flow characteristics for highly-specialized applications.
 The standard cage comes in three different flow characteristics:
 - quick-opening
 - linear
 - equal percentage
- Noise in gaseous service may be attenuated by using Whisper Trim[™] I, Whisper Trim III (Figure 8), Whisper NXG Trim and WhisperFlo[™] cages (Figure 10)
- 316 stainless steel packing box parts are standard (including packing flange, studs and nuts)

Features

- Compliance with the Clean Air Act—Optional ENVIRO-SEAL™ packing systems (Figure 6) provide an improved stem seal to help prevent the loss of process fluid. The ENVIRO-SEAL packing systems feature PTFE, Graphite ULF or Duplex packing with live-loading for reduced packing maintenance.
- Valve Plug Stability—Rugged cage guiding provides high valve plug stability, which reduces vibration and mechanical noise.

Figure 1. Fisher ED Control Valve with 667 Actuator

- More Flow Capacity for Initial Investment—Streamlined flow passages in the the ED, EAD and EDR valves provide excellent capacities and flow.
- Balanced Valve Plug Construction—Balanced valve plug construction permits use of smaller, lower-cost Fisher actuators. Also, trim inventory costs are cut because dimensional standardization permits use of most standard easy-e trim parts.
- Compliance with European Standards— Valves are available with dimensions specified by EN/DIN standards. See Figure 12.
- High-Temperature Capability with Class IV or Class V Shutoff—Use of multiple graphite piston rings (Figure 1) permit Class IV shutoff up to 593°C / 1100°F. Use of C-seal trim (see Figure 5) permits Class V shutoff up to 593°C / 1100°F.
- Sour Service Capability—Unless otherwise noted, references are to NACE MR0175-2002. Optional materials are available to meet NACE MR0103 and NACE MR0175 / ISO 15156. Material requirements under these standards vary by edition and year of issue; the specific standard must be specified.
- Operating Economy—Increased wear resistance provided by standard hardened stainless steel trim means long service life.
- Maintenance Economy—The valve body can stay in the pipeline during removal of trim parts. The EDR valve also features easy valve access without removing the actuator.

C-seal Trim Description

C-seal trim is available for valves with port diameters from 2.875 in. through 8 in.

With C-seal trim, a balanced valve can achieve high-temperature, Class V shutoff. Because the C-seal plug seal is formed from metal (N07718 nickel alloy) rather than an elastomer, a valve equipped with the C-seal trim can be applied in processes with a fluid temperature of up to 593°C / 1100°F.

ENVIRO-SEAL and **HIGH-SEAL Packing Systems**

ENVIRO-SEAL and HIGH-SEAL packing systems offer exceptional sealing capabilities. They easily install in your existing valves or can be purchased with new valves. These systems may help prevent the loss of process fluid. The long operational life and reliability of these systems also reduces your maintenance costs and downtime.

For applications requiring compliance with environmental protection regulations, the unique Fisher ENVIRO-SEAL packing system (Figure 6) and a unique ENVIRO-SEAL bellows seal system (Figure 7) are offered. The emission control packing system keeps emission concentrations below the EPA 100 ppm requirement.

For an excellent stem seal in applications that are not environmentally-sensitive, the Fisher HIGH-SEAL Graphite ULF packing system (Figure 6) is offered. The HIGH-SEAL packing system provides excellent sealing at pressure/ temperature ratings beyond ENVIRO-SEAL limits. ENVIRO-SEAL systems may also be applied for excellent stem sealing in higher pressure/temperature applications not requiring EPA compliance.

Χ

ENVIRO-SEAL packing systems, available with PTFE, Graphite ULF or Duplex packing and the HIGH-SEAL packing systems, Graphite ULF and graphite composite, feature live-loading and unique packing-ring arrangements for long-term, consistent sealing performance.

^{1.} End connection style abbreviations: FF - Flat Faced, RF - Raised Face, RTJ - Ring Type Joint.

^{2.} End connection EN1092-1/B.

^{1.} Lubricated nuts are standard.

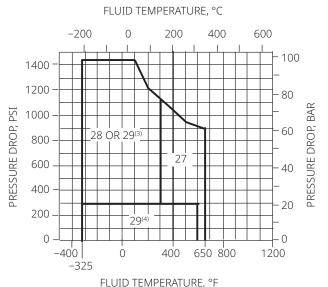

Lubricated nuts are standard.
 May be used down to -254°C / -425°F if manufacturing process includes Charpy impact test.
 This minimum is due to thermal expansion differential between piston ring and cage at low temperatures.
 Except 427°C / 800°F on oxidizing service.
 Spring is used only with single PTFE V-ring packing; lantern ring replaces spring in other packings.
 Except 371°C / 700°F on oxidizing service.

Figure 10. Typical Trim Used for All Valves Except with Whisper Trim III Cage, Whisper NXG Trim and WhisperFlo Cage

WITH CL600⁽¹⁾ 316 STAINLESS STEEL (CF8M) VALVE BODY

NOTES:

- 1. DO NOT EXCEED THE MAXIMUM PRESSURE AND TEMPERATURE FOR THE PRESSURE RATING OF THE VALVE MATERIAL USED, EVEN THOUGH THE TRIMS SHOWN MAY HAVE HIGHER CAPABILITIES.
- 2. BE ESPECIALLY CAREFUL TO SPECIFY SERVICE TEMPERATURE IF TRIM 3 OR 37 IS SELECTED, AS DIFFERENT THERMAL EXPANSION RATES REQUIRE SPECIAL PLUG CLEARANCES. SPECIFY TRIM 37H FOR TEMPERATURES ABOVE 210°C / 410°F. SPECIFY TRIM 3H FOR TEMPERATURES ABOVE 427°C / 800°F.
- 3. TRIM 29 MAY BE USED UP TO 103 BAR / 1500 PSI WITH CLEAN, DRY GAS.
- 4. USE TRIM 27 INSTEAD OF TRIM 29 FOR NONLUBRICATING FLUIDS SUCH AS SUPERHEATED STEAM OR DRY GASES BETWEEN 149 AND 316°C / 300 AND 600°F.

^{1.} For metal trim parts only. Restricted trim and full-sized limits are the same.

^{2.} Same material also used for bottom flange, if required.

Sanier infactor also see for bottom range, in required.
 May be used down to -254°C / -425°F if manufacturing process includes Charpy impact test.
 Lubricating service allows usage to 316°C / 600°F.
 Only available for Whisper Trim I cages.
 For Trim 3, upper temperature to 316°C / 600°F when used for Whisper Trim I cages.

^{1.} These in-body process temperatures assume an outside, ambient temperature of 21°C / 70°F and no insulation on the bonnet. When using any packing at low process temperatures, a cast extension bonnet may have to be used to prevent packing damage which could result from the formation of valve stem frost. Material selection for trim and other components will also be limiting factors.

Figure 13. Fisher ED and EDR Dimensions (also see Tables 14, 15 and 16)

NOTE:

1.
$$B = \frac{A}{2}$$

End connection style abbreviations: BW - Buttwelding, FF - Flat Faced, Scrd - Screwed, SW - Socketweld, RF - Raised Face, RTJ - Ring Type Joint.
 Valves which meet EN flange standards and have EN face-to-face dimensions are available only from Europe. Valves which meet EN flange standards but not EN face-to-face standards are available in the US. Consult your Emerson sales office.
